

gcprof-ai-academy

The Future of Learning

Credits & Technologies Overview | Project Showcase 2024

Project Vision

Redefining the educational experience through high-performance software architecture and seamless AI integration.

The Core Purpose

For Administrators

Complete CRUD control over courses, modules, and lessons. Real-time synchronization with Supabase ensures absolute data integrity across the platform.

For Students

A reactive learning environment. Access to high-quality video content and embedded documentation with zero latency and high-security access controls.

Next.js 15 **Architecture**

Modern Framework

Built with React 19 and Next.js 15, leveraging the **App Router** for optimized server-side rendering. Every page transition is managed via **Server Actions**, ensuring that the heavy lifting happens where it's most efficient: on the server.

The Power of Supabase

Unified Data Ecosystem

Supabase provides the backbone of gcprof-ai-academy. Using a **PostgreSQL** database, we manage complex relationships between courses, modules, and lessons.

-  Secure Authentication
-  Real-time DB listeners
-  Service-Role access protection

Stunning UI/UX

Tailwind CSS & Shadcn

A professional, high-contrast interface designed for focus. We use Tailwind CSS for utility-first styling and Shadcn UI for accessible, beautiful components.

The result is a responsive academy that feels native on any device, from desktop workstations to mobile tablets.

Admin Capabilities

Structure Builder

Dynamic module and lesson creation with drag-and-drop logic for ordering.

Class Control

Granular permissions: assign specific courses to specific classes academic cohorts.

Category CRUD

Fully manageable taxonomy for better course organization and filtering.

Real-Time Efficiency

100%

Data Sync Reliability

Zero Latency Architecture

By using **useTransition** and **startTransition** in our CRUD operations, the interface remains interactive even during heavy database updates. User feedback is immediate, making administrative tasks feel effortless.

Rich Media Learning

-  **Integrated Video Player:** Seamless YouTube embed support for video lessons.
-  **Document Embedding:** Direct Google Drive integration for PDF and text resources.
-  **Protected Access:** Lessons are only visible to authorized and active student accounts.
-  **Progressive Loading:** Content streams to the user to reduce initial load time.

Technology Ecosystem
